

REYNARD CORPORATION

Perfecting Your Light™

Quality Note – QN0006 Rev. 1

FIRST ARTICLE INSPECTION

A First Article Inspection (FAI) must be performed to validate all requirements specified in a drawing, specification, or other written documents that defined form, fit, and function of the product. All measured values are to be recorded from one part chosen from the first manufactured lot. This sample must be representative of the manufacturing process.

Reynard must review the FAI results and authorize continued production beyond the first production lot. If the Seller works on product prior to the authorization, it shall be at the sole risk of the Seller.

At any time that the manufacturing process changes, Reynard reserves the right request a new FAI. Additionally, Reynard may request a new FAI because of quality concerns.
